COVID-19 IS STILL A THREAT

VACCINES REMAIN COVERED AND AVAILABLE AT NO COST TO YOU.

We have come a long way in our fight against COVID-19, in large part thanks to vaccines that help us prevent serious illness and death. But the virus has not gone away. Every day, thousands of people are still diagnosed with COVID-19, which not only puts people at risk of severe outcomes but also interrupts important parts of our daily lives.

VACCINES ARE STILL YOUR BEST WAY TO PROTECT YOURSELF AGAINST COVID-19

Staying up to date with your COVID-19 vaccine is the best way to protect yourself and your community against the worst outcomes of COVID-19.

The Centers for Disease Control and Prevention (CDC) recommends that everyone 6 years and older should get one updated vaccine. This applies if you have received any original COVID-19 vaccines and if you have not. If you have questions about the latest COVID-19 vaccines or whether you are up to date with your COVID-19 vaccine, ask your health care provider.

It's also important for young children to keep up with their COVID-19 vaccinations. The CDC recommends that all children 6 months and older get vaccinated and receive at least one dose of the updated COVID-19 vaccine. When children should get vaccines can vary by the age of the child, so it is important you talk to your child's health care provider to ensure your child is up to date.

EVEN IF YOU'VE ALREADY HAD AN UPDATED VACCINE, YOU MAY BE ELIGIBLE FOR ANOTHER

If you are over 65 and it has been at least four months since your last vaccine or if you have a condition that weakens your immune system, you can get another dose of the updated vaccine.

COVID VACCINES ARE WIDELY AVAILABLE AT NO COST TO YOU.

Updated COVID-19 vaccines continue to be available to everyone in the United States free of cost. You may have heard about upcoming changes to how COVID-19 vaccines will be covered. Even as these changes take place, COVID-19 vaccines will still be fully covered and free of cost for adults and children.*

*Children who are uninsured or underinsured receive free vaccines through the Vaccines for Children Program. Adults who are uninsured or underinsured will receive free vaccine through the Bridge Access program, which begins in fall of 2023.
