

What to Know About Recommendations and Coverage for the Latest COVID-19 Vaccines

CVEEP
Fighting Infectious
Respiratory Disease

CHILDREN, TEENS, AND ADULTS

The latest COVID-19 vaccine is recommended for people ages 6 months and older.

COVID-19 has not gone away and remains a threat to your health and the health of your family and friends. Getting vaccinated against COVID-19 is a safe and effective way to help protect against the most severe outcomes of the virus and reduce the likelihood of experiencing severe symptoms if you or your child do get infected.

Millions of individuals across the United States have been safely vaccinated against COVID-19. Ongoing safety monitoring efforts continue to demonstrate that COVID-19 vaccines are safe and effective for people of all ages.

GETTING "UP TO DATE"

The 2025–2026 COVID-19 vaccines are recommended for people 6 months and older, including pregnant women, by the Centers for Disease Control and Prevention (CDC) and leading medical societies.

PEOPLE WHO ARE IMMUNOCOMPROMISED

Another dose of the 2025–2026 COVID-19 vaccine is recommended six months after the first dose, with the option to receive it as early as two months, for individuals who are 6 months and older with a weakened immune system. Because timing and number of doses can vary based on health conditions and prior vaccination history, talk with a healthcare provider.¹

VACCINE CO-ADMINISTRATION

It is safe for you or your child to receive COVID-19 vaccines at the same time as other routine vaccinations.

VACCINATION AFTER COVID-19 INFECTION

People who recently had COVID-19 may delay their next vaccine dose by three months from when symptoms started, or, if asymptomatic, three months from when they first received a positive test.

Treatment Options

If you are infected with COVID-19, there are antiviral treatments available that can help reduce the severity of symptoms and the risk of hospitalization and death if taken within the first few days of symptom onset. Talk to your healthcare provider to see if a COVID-19 antiviral treatment is the right option for you or your loved one.

**AM I
AT RISK?**

Learn more about your risk of developing severe COVID-19 and determine if an antiviral treatment may be right for you. Visit cveep.org/treatments for more information.

**you're
covered.**
